SUMMARY

DevOps Engineer with hands-on experience building CI/CD pipelines, cloud infrastructure, and automation frameworks on Microsoft Azure. Skilled in Terraform IaC, Azure DevOps YAML pipelines, Linux administration, and Bash/Python scripting. Focused on reducing manual overhead, enforcing deployment consistency, and delivering secure, scalable platform engineering solutions.

TECHNICAL SKILLS

Cloud	Microsoft Azure (VMs, VNets, NSGs, Storage, Resource Groups)	Scripting	Bash · Python
CI/CD	Azure DevOps Pipelines (YAML) · GitHub Actions	Networking	Azure VNets, NSGs, subnet design, security group rules
IaC	Terraform (modules, remote state, workspaces)	Monitoring	Azure Monitor · Pipeline Alerting
Version Control	Git · GitHub (branching, PRs, branch protection)	OS	Linux (Ubuntu / CentOS) — admin & hardening

EXPERIENCE.

DevOps Engineer Intern (Lead) · *SOCH*

Feb 2025 – Jun 2025

- Led Linux server provisioning automation using Bash scripts, eliminating configuration drift across development and QA environments.
- Migrated a fully manual deployment process to an automated Azure DevOps CI/CD pipeline, reducing deployment effort from hours to minutes.
- Built a Python utility to generate Terraform variable files from environment manifests; deployed foundational Azure infrastructure (VNets, subnets, VMs) as the team's first IaC workflow.
- Documented Terraform modules and Linux troubleshooting runbooks in the team GitHub Wiki, improving onboarding and reducing repeated support queries.

PROJECTS

Azure Infrastructure Automation Platform · github.com/harshbhimra01

Terraform · Azure · Bash · Python · GitHub Actions

- Architected a fully modular Terraform project to provision production-grade Azure infrastructure (VNets, NSGs, Linux VMs) with one-command environment creation and remote state locking for safe team use.
- Integrated a GitHub Actions CI workflow (terraform fmt, validate, plan) on every PR to block misconfigurations; automated post-deployment server hardening via Bash and dynamic variable file generation via Python.

Production CI/CD Pipeline for Containerised Application · github.com/harshbhimra01

Azure DevOps · Docker · Bash · Python · Git

- Designed a full-lifecycle Azure DevOps YAML pipeline with isolated dev and production stages, manual approval gates, automated rollback on health-check failure, and secret management via variable groups.
- Built a Python script to parse JUnit test results into structured deployment reports; configured automated Git tagging on successful releases and failure alerting for rapid incident response.

EDUCATION

Bachelor of Technology (BCA) · Mangalayatan University, Aligarh

2023 – 2026

Computer Science / Information Technology

CBSE Board 12th · Mata Sukh Devi Public School

2021 – 2022
